

Summer 2024

Easy PAS Plus news

Welcome

Welcome to the Summer Newsletter from GreenPro Easy PAS Plus.

We aim to make sure that our updates go to the person in your organisation that needs the information - usually the PAS Nominee.

If you have passed this role on to someone else or if you would like someone else to be sent these updates, please let us know so that we can update our records.

Industry news

New PAS 2030:2023 documents available now

Certification Bodies have started to assess against the newest standard even though it won't be implemented until next March. So, we've been working behind the scenes to make sure the latest versions of the documents are up and running for you.

This means that you now have both 2019 and 2023 documents available on your online dashboard. We have updated the Forms and Procedures, leaving the rest of the QMS the same, as they are not written in relation to any particular version of PAS.

To view the new documents, simply let your consultant know that you want access and we will add them to your dashboard free of charge. The 2019 versions of the documents will remain available for the foreseeable future.

Now that PAS 2030 and PAS 2035 have been split into separate documents, we have removed PAS 2035 documents from the QMS. This was causing confusion about who was responsible for which area of the process. So, the new documents are PAS 2030 only.

All elements of retrofit design, including areas such as ventilation assessments, air tightness, and medium term improvement plans are the responsibility of the Retrofit Coordinator and Designer under PAS 2035 – not the Retrofit Installer under PAS 2030.

If you don't have one already, it's vital that you have a qualified Retrofit Coordinator for your PAS projects who will facilitate the completion of a Retrofit Design. They should be responsible for project management across the board from project inception to handover, including TrustMark lodgement of the job.

Your responsibility, as a PAS 2030 Retrofit Installer, is to have a Retrofit Design that claims compliance with PAS 2035, to carry out a Pre-Installation Building Inspection, and prepare a project-specific Method Statement to ensure that the design is suitable for the building before installing. If it is not, you must inform the Retrofit Coordinator. It's their responsibility to correct the design.

We strongly recommend reading the 2023 versions of the Procedures on your online QMS to understand the processes. Your consultant can provide you with updated training assignments, process maps, example documents and updated checklists.

PAS 2030:2023 and PAS 2035:2023 are available free of charge from BSI. Make sure you have a copy of PAS 2030:2023 as soon as possible.

GreenPro News

Get your Health & Safety Training sorted with GreenPro

We've recently launched a complete set of Online Health and Safety Training Courses so we can help you keep your team's training up to date.

We can tailor a set of courses for each of your team depending on their role, including subjects such as:

- Manual handling
- Working at heights
- Electrical safety
- Ladder safety
- Asbestos awareness

The short, online courses can be completed anywhere, whether you are using a computer, tablet or a mobile phone. When you complete a course, you get a certificate which can be kept as a training record.

For existing GreenPro customers we offer preferential pricing of £15 per user per course.

[Find out more about our courses here.](#)

Document Updates

All Procedures and Forms have been updated to comply with the latest version of PAS 2030, so please make sure you familiarise yourself with these. They have been reset to version 1 under the PAS 2030:2023 sections of your online dashboard.

We have removed the following documents from the 2023 Forms as these were PAS 2035 forms relating to design, claims of compliance and ventilation:

- GD F03
- GD F04
- GD F04A/B/C
- GD F16A
- GD F20

We have also removed Procedures GD P30- GD P63. This is because PAS 2030 is now free to download, so the information contained in these procedures is held in the measure-specific annexes and is easily accessible. Instead, we have condensed these procedures down into one new Procedure, GD P30 – EEM Compliance Procedure, which replaces the previous GD P30.

Health and Safety Advisor Service

In addition to Health and Safety Training, we can also offer Health and Safety support tailored to the renewable and energy efficiency trades. This is very helpful if you're submitting tenders, bidding for larger contracts, or applying for funding that requires you to have access to a qualified Health & Safety professional. The specialist GreenPro service enables you to get your own named, qualified advisor from just £400.

Feel free to chat with us!

We want your opinion to be heard

If you have a spare 5 minutes, it would be greatly appreciated if you completed our [Customer Satisfaction Survey](#) and let us know what features you'd like to see on our dashboard. Your feedback directly influences which direction we will take for the next phase of development, so please do tell us what you think would make your life easier in the MCS space.

Ensure you're using the latest documents

Remember to ensure that you are always using the most up to date forms, these can be accessed via the 'Forms' section of your online QMS.

And finally...

We want to ensure you're getting answers to your questions. We don't always know the answer, especially if it falls outside of our scope, but we will do our best to help you. That's what we're here for.

If you have any questions, either on the information within this update or any other PAS related matter, contact your Consultant on 0161 768 5807, or email them at info@greenpro.co.uk to arrange a call back.
